Workshop

Northwest Reforestation: choosing plant materials suited to current and future climates

23 May 2023 • 9am-5pm • Olympic National Forest Supervisor's Office, Olympia, WA

Summary

This interactive workshop promotes peer-to-peer learning for climate-informed reforestation. It will bring together technology transfer specialists and practitioners from across ownerships in the Northwest. The workshop will include hands-on experience with the Seedlot Selection Tool, and participants will be invited to use projects and scenarios from their own work. Join us to discuss approaches for climate-informed seed selection, a critical step in the reforestation pipeline.

Objectives

- Share examples of assisted migration plantings that have been established in Idaho, Oregon and Washington.
- Promote interactive peer to peer learning around assisted migration.
- Provide hands-on training with the Seedlot Selection Tool to support climate-informed reforestation.

Intended audience

Silviculturists and resource managers from federal, state, and local agencies, private companies, and tribal nations, university extension specialists.

Focus

This workshop will focus on assisted population migration, and other types of migration will be discussed.

Assisted population migration: movement of seed sources within a species range.

Assisted range expansion and species migration: movement of seed sources just outside and well beyond the current species range, respectively.
