

Climate Hubs Tool Shed

About

The Climate Hubs Tool Shed provides information on resources from across the country that can assist agricultural and forest land managers in adapting to climate variability and change. Users can search with a keyword and categories or use the advanced search function for specific issues. The database includes tools that are directly relevant to climate variability and change, as well as resources that assist in managing factors that interact with climate variability and change, such as drought, pests, and extreme weather. The target audience is extension and consultants, but the database is also be useful for land managers, landowners, and researchers.

Feedback

Contact Michael Gavazzi, michael.gavazzi@usda.gov, with questions or comments about the Tool Shed, or suggestions for new tools.
